✓ **Fully authorized to work in Canada — Post-Graduate Work Permit (PGWP) | No sponsorship required**

PROFESSIONAL SUMMARY

Results-driven BI Developer with 4+ years of experience delivering end-to-end analytics solutions using Power BI, Microsoft Fabric, SQL, and Python. Hands-on expertise in star schema dimensional modeling, DAX, Medallion Architecture (Bronze/Silver/Gold), semantic model design, and ETL pipeline development. Experienced working in Agile/Jira environments, translating stakeholder requirements into analysis-ready data products. Currently building healthcare BI solutions on Microsoft Fabric OneLake for a Canadian telehealth platform. Fully authorized to work — no sponsorship required.

TECHNICAL SKILLS

Core BI & Visualization Power BI Desktop/Service, Tableau, Microsoft Fabric (OneLake, Lakehouse, Dataflows Gen2), Excel

Data Modeling & DAX Star Schema, Dimensional Modeling, DAX, Power Query (M), Semantic Models, DirectLake, Data Warehouse

ETL & Architecture Medallion Architecture (Bronze/Silver/Gold), ETL Pipelines, Multi-source Data Ingestion, Python (Pandas, Matplotlib, Seaborn), SQL

Databases & Cloud PostgreSQL, MySQL, MongoDB, Azure, AWS, Git, GitHub

Methodology Agile, Jira, User Story Definition, Stakeholder Collaboration, Process Flow Design

PROFESSIONAL EXPERIENCE

Business Analyst — BI Focus

June 2025 – Present

YQG Technologies Inc. | Windsor, ON

Power BI · Microsoft Fabric · OneLake · Lakehouse · Dataflows Gen2 · DirectLake · Medallion Architecture · Python · DAX · Agile · Jira · Azure SQL

- **Designed a star-schema dimensional data model** with 5 dimension tables and a central fact table, powering executive KPI dashboards for a live telehealth platform with real-time patient flow and appointment analysis.
- **Implemented Medallion Architecture (Bronze/Silver/Gold) in Microsoft Fabric OneLake** — organizing raw EMR data through structured transformation layers into analysis-ready semantic models, enabling consistent dimensional reporting across clinical teams.
- Built and published **semantic models in Power BI Service with DirectLake connectivity**, enabling scheduled refresh, row-level security, and shared dataset access across clinical reporting teams — eliminating duplicate report builds for 30+ users.
- **Developed Dataflows Gen2 pipelines in Microsoft Fabric** to automate multi-source ingestion of appointment and patient records from EMR systems into the OneLake Lakehouse, replacing manual extraction workflows and reducing data preparation time by 40%.
- Built a **Python-based ETL pipeline (Pandas, Seaborn)** to automate appointment data extraction from EMR PDFs — eliminating manual data entry and reducing dependency on premium EMR subscriptions.
- Engineered an EMR-driven notification system that **reduced patient no-shows by 14%** through automated scheduling triggers and data-driven alerts built on Fabric event streams.
- **Collaborated with doctors and stakeholders in an Agile/Jira environment** to translate clinical requirements into user stories, process flows, and analysis-ready dimensional models — delivering 3 dashboard releases across 2 sprint cycles.

Business Intelligence Developer

Jan 2022 – Aug 2023

Appjoice Technologies | Bangalore, India

Power BI · Azure SQL · Power Query (M) · Star Schema · Medallion Architecture · Python · Pandas · Matplotlib · Agile · Git

- Delivered end-to-end BI solutions including **star-schema dimensional warehouse design**, Medallion-style ETL pipeline development, data retrieval optimization, and executive dashboard delivery across multiple enterprise client engagements.
- **Designed dimensional data warehouse structures on Azure SQL**, applying star-schema modeling and Power Query (M) transformations to build analysis-ready semantic datasets for multi-dimensional analytical reporting.
- Published and managed Power BI Service workspaces with scheduled dataset refresh, role-level security, and DirectLake-style connectivity — supporting daily dashboard consumption by **50+ business users**.
- **Built automated Python ETL pipelines (Pandas, Matplotlib)** for multi-source data ingestion, cleansing, and integration — **reducing manual processing time by 25%** across 4 client accounts.
- Worked in **Agile sprint cycles using Jira**, collaborating with cross-functional teams to define user stories, prioritize data requirements, and deliver iterative BI improvements aligned to business KPIs.

Data Analyst
Sept 2019 – Nov 2021

FLYBAXi | Jaipur, India

Power BI · SQL · Python · Azure · Star Schema · ETL · Git

- Designed and deployed KPI-driven Power BI dashboards backed by **star-schema dimensional models**, improving reporting accuracy and **saving 15+ hours/month** of manual reporting effort.
- Built SQL-based data retrieval solutions and optimized analytical queries connecting on-premise sources to Azure cloud storage — feeding consolidated executive dashboards for operational and financial reporting.
- Developed Python and SQL ETL pipelines to integrate, transform, and load data from multiple sources into structured dimensional models, implementing **Bronze-to-Gold style transformation logic** for data quality assurance.
- Participated in **Agile sprint planning** and stakeholder review sessions to iteratively refine dashboards based on business feedback and evolving reporting requirements.

PROJECTS

Optimizing Operational Efficiency and Inventory Management for Tim Hortons | Link

Python · XGBoost · Random Forest · SHAP · Tableau · Pandas · Sentiment Analysis · Hypothesis Testing

- Conducted end-to-end data analysis on 2022 Tim Hortons LaSalle store data, identifying high waste drivers (Toppings, Bakery Items) and a 20% summer waste spike due to perishable inventory.
- Built XGBoost regression model to forecast Net Sales ($R^2 = 0.79$) and Random Forest model to predict Waste Cost ($R^2 = 0.88$, RMSE: 6.80) using engineered features like Waste_to_Actual_Ratio and Unit_Cost_Impact.
- Applied SHAP analysis with Random Forest to identify top waste and sales drivers (Variance Units, Price Per Unit, Inventory Category), enabling targeted inventory control recommendations.
- Built interactive Tableau dashboards visualizing waste by category and SPLH trends; conducted sentiment analysis on Google Reviews revealing 60% positive sentiment for LaSalle vs. 80% for Windsor.
- Validated findings via 3 hypothesis tests (rebate vs. sales, hours vs. sales, pack size vs. waste cost) and collaborated with store manager to align deliverables with operational needs.

CERTIFICATIONS

Tableau Desktop Specialist | **AWS Cloud Practitioner**

EDUCATION

Postgraduate Diploma — Data Analysis for Business April 2025

St. Clair College, Windsor, ON

Bachelor of Science — Computer Science April 2019

Arya College of Engineering & IT, Jaipur, India

LEADERSHIP & VOLUNTEER

President, Data Club — St. Clair College June 2024 – April 2025

Lead Volunteer, Open House — St. Clair College Jan 2024 – April 2025

Academic Tutor — ML, Data Visualization, Statistics — St. Clair College June 2024 – Aug 2024
